Zusammenfassung

For many papers, abstracts are important. For this one not. This is just some filler text.

1   Introduction

As shown by Antkare (Labbé 2010; Antkare 2009), publishing is important. This example document contains fragments typically used when writing a scientific paper. Please check the Pandoc User's Guide for more details on *Pandoc-flavored Markdown*. Figure 1 is a placeholder.

Note: Footnotes are useful[1].

2.1 Apples

Lists are easy:

- a first item
- and a second one with an unrelated footnote[2]

---

[1] When used sparingly. They are a good place for linking to websites, such as https://github.com/alex/what-happens-when.

[2] For long URLs, insert manual breaks like this: https://docs.google.com/document/d/1B3GfZkwAfHlQE5kAuHcn-wq8I -7D5UF2Ap7C_CYk5co/

Abbildung 1: An image that demonstrates something. This is the PDF version of the image.

2.2 Bananas

Numbered lists:

1. the user always comes first
2. minutes come second
3. now comes the last item. Be aware that Pandoc ignores which numbers you actually place in front!

A small *pseudo-code* listing (which probably should have a caption?)

```
start:
  wait some trime
loop:
  read data
  if data good:
    print data
  else:
    complain
  goto loop
```

Put two space characters at the end of a line to insert a manual line break.
Teletype formatting example: `pandoc --help` is helpful.

Insert an empty line to start a new paragraph.
